The following is an examiner's statement of reasons for allowance: the prior art fails to teach or suggest a lithography substrate imprint tool, comprising a light transparent base, a light transparent neck component located next to the base, and a light blocking distal end located next to the transparent neck, wherein the neck component is narrower than the base and wider than the light blocking distal end, so that different portions of a dielectric material being imprinted can be selectively cured such as the portions of the substrate under the transparent neck components could be cured at different rate than those portion under the base while the portions of the substrate under the light blocking ends would not be exposed to heat during the imprinting process.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
